## Magif's role

Magif provides the Magif AI-agent platform. Customers configure and deploy agents for their own intended use. The AI Act role and obligations applicable to each deployment depend on the system configuration and use case.

## System description

A platform on which professional creators build AI assistants from their own methods and content. Those assistants support the people the creator works with. They support and extend a human practice; they do not replace it.

## Intended use

Coaching-style guidance, learning support and structured self-reflection for the creator's clients, based on the creator's material.

## Current classification position

Magif is not intended for the high-risk uses listed in Annex III of the EU AI Act. Customers remain responsible for assessing whether their specific deployment introduces additional obligations.

## Basis and assumptions

This position is based on an internal review of the platform as configured today. It does not assess any specific customer deployment. A customer who introduces a high-risk use case is responsible for the additional obligations that follow.

## Prohibited and restricted uses

- Medical diagnosis or treatment decisions
- Legal, financial or safety-critical decision making without human review
- Processing of data the creator has no right to use
- Deception about the AI nature of the assistant

## **Transparency mechanism**

End users are informed in the chat interface that they are interacting with an AI assistant. This control is intended to support the applicable Article 50 transparency obligation.

## **Human oversight**

Creators supervise their agents: they define the method, review performance, and remain the human contact behind every agent.

## **Model governance**

Models are selected and updated centrally by Magif. Model changes are rolled out platform-wide with monitoring, so behavior stays consistent and traceable across agents.

## **Incident and escalation process**

End users can reach the creator behind an agent, and any user can contact Magif support to report a problematic response.

## **Testing and evaluation status**

Agent behavior is tested internally through manual review and scenario testing during development and before releases. There is currently no formal independent evaluation; independent assessment status is listed on the Security page.

## **Known limitations**

- Agents can produce inaccurate or incomplete answers. Output should be treated as guidance, not as fact or professional advice.
- Agents are not a substitute for medical, psychological, legal or financial professionals.
- Agents work from the creator's content; the creator remains responsible for that content.

This statement is an internal assessment prepared by Magif. No external or independent EU AI Act conformity assessment has been completed. Magif does not represent that an independent assessment exists.
